

Beverly Oaks Animal Hospital
PRE-SURGICAL BLOOD TEST & IV CATHETER/FLUID THERAPY

ALL SURGERIES ENTAIL SOME RISK.

The Doctors of Beverly Oaks Animal Hospital recommend a pre-surgical blood test to check the liver and kidney functions before surgery. To provide a greater margin of safety during surgical procedures we highly recommend IV catheterization with fluids for all surgical procedures. While these procedures cannot guarantee the removal of all surgical risks, they do reduce them significantly.

We also recommend microchipping your pet. This quick and simple procedure increases the chances of a safe return home in case your pet gets lost.

This hospital is fully equipped to perform all pre-anesthetic tests recommended. The results will be available before surgery is performed. Should there be an indication of abnormality, we will either inform you before proceeding or take the necessary steps to insure the highest quality of medical care possible. You may elect, or decline these procedures for your pet by checking the appropriate lines below.

THE COST OF A PRE-SURGICAL BLOOD TEST IS *
THE COST OF AN IV CATHETER WITH FLUIDS DURING SURGERY IS
ORIGINALLY *. A 50% DISCOUNT IS APPLIED FOR APPLICABLE PROCEDURES,
EQUALING *

THE COST OF A MICROCHIP IS \$54.11

Pain management is included in procedures. This treatment relieves your pet of pain and discomfort associated with surgery/trauma. Pets that are not in pain recover more quickly.
